Pre-sowing seed treatment

«Foliart Gel»

Universal adhesive/
sticking agent.

«Foliart Riza»

Root formation stimulant.

Stem elongation

«Foliart VSG-30»

Protection against herbicide stress.

Flag leaf

«Foliart Phloema»

Stimulates nitrogen uptake and metabolism, enhances photosynthesis, prevents chlorosis, increases yield quantity indicators.

Wax ripeness

«Foliart Senicant»

Improves grain quality. Increases quality yield indicators.

* BBCH — is a universal decimal scale of plant phenological stages, describing crop development from sowing/bulb/bud to senescence or dormancy.
